

Training Support: GeneSys Pad Auto-On Function

9/4/2020

This guide will explain how to properly install pad drivers onto the Mid-Sized GeneSys Autoscrubber using the standard auto-on functionality.

1. Place the pad drivers underneath the deck in the approximate operating position (**FIG A**).

2. Put the machine into **MEDIUM DOWN PRESSURE** (**FIG B**) and turn the speed knob counter-clockwise until it stops (**FIG C**)

3. Pull the machine bail to engage the motors and attach the pads. If the pads do not attach, raise the deck and attempt steps 1 and 2 again.
