INSTALLATION INSTRUCTIONS

PE50086 Transport Kit

For use on 30" Propane Stripping Machine

1. Attach the Transport Bracket to the Plate with the long pin.
2. Tip the Machine back and block it in the front so that there is room for the caster wheel to swing down and not touch the floor.
3. Position the plate so it is in the front center of the machine and the bracket is back against the skirt. See attached pictures.
4. Mark the holes for the plate using the plate as a template. Use a pencil.
5. Use a center punch to mark the center of the holes for drilling.
6. Use a small pilot hole to be sure the larger drill does not move. Drill the final hole with a 3/8" bit.
7. Bolt the plate to the machine using the hardware provided.
8. Swing the wheel down and mark and drill the hole in the lower ledge for the pin in the bracket. See attached picture.
9. Install the pin through the bracket and lower the machine for transport.
10. For operation, tip the machine back and remove the front pin, lower the machine. The bracket can then be removed and reversed with the long pin holding it in place with the wheel up using the lower set of holes. See right picture below.
