

Stealth ASD 20B/BT serial after 215 pad driver removal.

1. Push the deck lifting pedal down and lock the scrub deck in the up (transport) Position

2. If the machine is off, turn it on

3. Locate the ECO Button, press it twice quickly.

You should hear the brush motor run momentarily and the pad driver fall off on to the floor. If this doesn't happen try the sequence a couple of times. Sometimes if the pad driver has been on the machine for a long time they might get sticky.
