Citymaster 650

New oil drain valve for Yanmar engine

Affected vehicles:

Citymaster 650 1470.15

Dear Sir or Madam,

from now on, instead of an oil drain plug, an oil drain valve will be mounted from factory on the oil pan of the Yanmar engine (the drain hose is located in the vehicle in the tool bag (97124044)).

The valve enables an easier, faster and, above all, very clean oil change on the engine.

Vehicles with an oil drain plug can be retrofitted with the new oil drain valve. The set consists of a drain valve, a protective cap and a drain hose. It can be ordered at Hako under spare parts number: 01479580.

Documentation on the modification can be found in the appendix.

Best regards
