Citymaster 1650 **Engine oil 5W40 for HATZ engine** **Affected vehicles: all (1491.15)**

Dear Sir or Madam,

the stated specification for the engine oil of the HATZ engine is incorrect in the operating instructions for the Citymaster 1650. The correct engine oil specification is:

ACEA E9, API CK-4

This is a common specification so that you should have no problems obtaining a compatible engine oil. Please ask your local oil supplier for advise.

In the operating instructions, we recommend an engine oil with a viscosity of 5W40 which is suitable for all applications and a wide temperature range. You can use an engine oil with 5W40 for temperatures between -30°C to +40°C.

According to HATZ, you can also use an engine oil with a viscosity of 10W40. You can use an engine oil with 10W40 for temperatures between -20°C to +40°C.

The engine oil specification has already been changed in the training documents and Hako system maintenance.

The information will be changed in the operating instructions at the next reversion

Best regards,

André Meier
