Introduction

Thank you for using the Kubota diagnostic tool (hereafter Diagmaster). This guide explains how to install Diagmaster databases, which must be installed prior to using the Diagmaster.

Diagmaster Databases are programs for setting up the latest model information on the Diagmaster and normally they are created for the product lineup of one manufacturer. In order to use the Diagmaster to diagnose problems with the engine and/or its accessories from a specific manufacturer, you have to have the Diagmaster Database created for that manufacturer. If you have to diagnose the products of more than one manufacturer, install the Diagmaster Databases that correspond to each of the manufacturers.

NOTE

• This software cannot be used on its own. Only ever use it in an environment in which Diagmaster (Ver. 4.2.4 or later) has already been installed.

Installation Procedure

Follow the steps below to install the software. If you are already using Diagmaster, follow the procedures from step 2 on.

- Install Diagmaster
 Install Diagmaster while referring to the installation guide that comes on the Diagmaster CD-ROM.
- Install Diagmaster Database(s)
 Install the software according to this guide.

1. Diagmaster Database Installation

■NOTE

- When installing this software, be sure to do so as a user with administrator privileges. If the software is installed by any other user, it may not function properly.
- Be sure to close all other applications before starting the installation. It may not install correctly otherwise.

(Reference)

- The screenshots below are from an installation in Windows 7 Although the screens when installing the software on a different OS, such as Windows8, may differ slightly, the procedure is the same.
- (1) Log in on a PC as a user with administrator privileges.
- (2) Execute the file "SetUp_Diagmaster_DB_For_* * *_X.XX.XXX.exe (provisional name) ", which is on the CD-ROM or which you downloaded.

For the sake of convenience, the file name "Diagmaster Database for ALL" is used in the following explanation.

(3) If a warning like the following appears, click [Yes (Y)].

😵 User Account (Control		×

(4) First of all a language selection screen opens.

At this point, select the same language (normally English) as the OS language.

If a language other than the OS language is used, the text may be displayed as gibberish.

(Reference)

• For users who diagnose different brands, selecting [Yes] on the selection screen above allows you to change things like the logo design of diagnostic tools, etc. The brand logo changes on the following 3 screens.

The minimized brand logo also changes when 😥 is pressed.

截 Diagmaster		
Bagnate	Kuboto Diagmaster	
	 * Before starting diagnosis 1. Connect the data link cable and USB cable to the interface (PYTHON or DST-i). 2. Connect the interface (PYTHON or DST-i) to a USB port on the PC. 3. Connect the data link cable to the vehicle's data link connector (DLC). 4. Turn the vehicle key switch ON. 5. In case of using PYTHON, set the operating settings in the interface. (This step is not necessary if the connecting USB port has not been changed.) 5.1 Run the Python1BConfig program (shortcut on the desktop). 5.2 Click the Auto Detect button, and set the PYTHON operation settings. 5.3 After Auto Detect has finished, quit the Python1BConfig program. 	
	* Starting diagnosis 1. Click [Start Diagnosis] from the menu to the lower left.	
	 * Stopping diagnosis 1. Click [Exit Application] from the menu to the lower left. 2. Turn the vehicle key switch OFF. 3. Disconnect the data link cable from the vehicle's data link connector (DLC). 4. Disconnect the interface (PYTHON or DST-i) from the USB port off the PC.

2. Diagmaster Database Uninstall

If you wish to delete a Diagmaster Database from your PC, run the uninstall according to the following steps.

- When uninstalling a Diagmaster Database, be sure to do so as a user with administrator privileges. If done as any other user, malfunctions may occur, such as the shortcut icon not being updated, etc.
- (1) Click the [Start] button and select [Control Panel] or [Settings] and [Control Panel].
- (2) From the control panel, and then click [Uninstall a Program] of the [Programs].
- (3) Select [Diagmaster Database for ALL] from the list of installed applications and then click the [Uninstall] button.
