Move on up!

Great performance under all conditions:
Available in three different working widths and equipped with either cylindrical or disc brushes, the Scrubmaster B175 R masters every cleaning task while providing a high area performance – even when working uphill. The scrubber-drier has sufficient power to perform all cleaning tasks effectively, also on inclines. Activating the slow

mode reduces the working speed to 3.5 km/h to ensure controlled and efficient cleaning. The 90° steering lock provides a minimum turning circle in confined areas. These are just a few of many examples that show what makes the Scrubmaster B175 R the perfect choice when it comes to cleaning large areas such as airports, industrial facilities, shopping centres and logistic areas.

Everything at a glance at the twist of a knob
The large clearly structured 4.3-inch colour touchscreen informs the driver about the battery status of the solution and recovery tank. Selecting the functions is intuitive and easy, either via the turn-push regulator or by using the turn-push regulator.

Optimal overview:
The centrally placed driver's seat allows the operator a perfect view onto the work area.

Powerful and equipped with clever details

The Scrubmaster B175 R is a perfect workplace for the operator: ergonomically designed and equipped with clever technical details for more efficient working. All operating elements are within easy reach and intuitive to use – which helps to shorten the initial training for operators. Daily

Practical solution:
The squeegee folds up and out of the way manually to make daily cleaning and maintenance of the machine easier.

Hako-AquaForce®

Hako-AquaForce® means both efficient and environmentally-friendly cleaning with demineralised water, completely chemical-free. In addition to achieving superior cleaning results and protection against fast re-soiling, you can profit from saving costs due to a significantly reduced consumption of cleaning detergents.

Hako-Chemical on Demand

Available as an option, Hako's technological feature Hako-Chemical on Demand (CoD) increases both cleanliness and environmental protection while lowering operating costs at the same time. Cleaning detergents can be added at the push of a button and only when necessary. Less heavily soiled floors can be cleaned without using any chemicals at all.

Hako-AquaControl

Hako-AquaControl ensures that both the brushes and the supply of water stops automatically when the machine stands still. In addition, the system provides precise and speed-dependent dosing of the cleaning solution.

Suitable also for hygiene-sensitive areas

The solution and recovery tank can be equipped with Hako-AntiBac® as an option. The feature inhibiting fungal and bacteria growth provides improved hygiene and reduces odour development as well as costs due to the lower consumption of disinfectants required to clean the tank.

Quickly on site and available 24/7

Quickly on site when needed: 650 across Europe ensure timely technician service network and GPS-supported guarantee that necessary maintenance is carried out promptly and efficiently – and to ensure maximum downtimes – and to ensure maximum

Hako Finance
